

# FATALITY NARRATIVE

## Dairy Laborer Dies when Loader Falls into Manure Pit

**Industry:** Dairy  
**Task:** Operating loader to feed cows  
**Occupation:** Dairy laborer  
**Type of Incident:** Manure pit drowning

**Incident Date:** February 25, 2015  
**Release Date:** November 1, 2016  
**SHARP Report No.:** 71-153-2016

In February 2015, a 27-year-old dairy laborer operating a loader drowned when the loader fell into a manure pit. The victim was an experienced dairy worker who previously had operated loaders at other farms. He had been working for 6 months at his employer's dairy farm. His job duties included operating a loader to bring feed to cows in a pen and helping with milking. He had been trained by his supervisor how to operate the loader. He worked the night shift from 9 p.m. to 6 a.m. Prior to the incident he was working alone operating the loader to push feed to the penned cows. When he finished his task, he drove the loader along a dirt road on the employer's property that would take him to the milking area, where he would

spend the rest of his shift. On the way, he turned off the road away from his destination and travelled across a field back toward the cow pen. It is unknown why he went toward the pen. In the field between the road and the pen, there was an unfenced, unmarked ground level manure pit. This manure pit was 50 feet long by 15 feet wide and 4-to 6-feet deep. As he was driving in a 15-foot-wide area between the pit and fence, the loader tipped over into the pit. It landed on its side, submerging the operator's cab. The victim drowned. The coroner reported to the media that he had methamphetamine in his system.

### Requirements

- Employers must furnish to each employee a place of employment free from recognized controllable hazards likely to cause serious injury or death.  
See [WAC 296-307-045\(1\)](#)
- Address manure storage dangers and safety in your written accident prevention program.  
See [WAC 296-307-030](#)

### Recommendations

- To prevent drowning of workers, uncovered ground level earthen manure storage lagoons, ponds, and pits should be surrounded by fencing, railings, or other protective barriers and warning signs posted to prevent accidental entry of farm vehicles, equipment, and workers.
- Operators who are under the influence of drugs or alcohol should not operate equipment or motor vehicles, as their ability to respond appropriately to hazardous conditions can be impaired.
