This check list is designed to be generic in content and may not include all requirements for your particular installation. The manufacturer’s installation instruction must be adhered to and available to the inspector at the time of inspection. Be sure you can answer “Yes” to all of the questions before calling for inspection. Failure of the inspection will require an re-inspection fee to be paid. Gas lines checklists are available. Verification of gas testing to be made by either inspector or affidavit.

**Furnace Compartment**

3280.203(b)(3) and 203c(1)(iii) & (iv) - Walls adjacent to or enclosing a furnace and ceilings above shall have an interior finish with a flame-spread rating not exceeding 25. Sealants and other trim materials 2 inches or less in width used to finish adjacent surfaces (i.e. 3/8” or thicker sheetrock) within these spaces are exempt from this provision provided that all joints are completely supported by framing members or by material having a flame spread rating not exceeding 25.

3280.807(a) - Required clearance from water heater to combustibles as per its listing.

3280.710(a)(2) - Roof jack is proper, listed, and sealed.

3280.710(a)(2) - Gas shut off valve at appliance.

3280.807(a) - Low voltage thermostat wire through wall of furnace must be grommeted.

3280.715(b)(3) and Mfr’s Specifications - Air return duct shall not be less than 2 sq. inches for each 1000 BTU input rating of appliance or as per listing

3280.707(e) - Location of thermostat and set level (3 feet from compartment door and not on an outside or compartment wall).

**Water Heater Compartment**

3280.2039B)(3) AND .203c(1)(iii) & (iv) - Walls adjacent to or enclosing a water heater and ceilings above them shall have an interior finish with a flame spread rating not exceeding 25. Sealants and other trim materials 2 inches or less in width used to finish adjacent surfaces (i.e. 3/8” or thicker sheetrock) within these spaces are exempt from this provision provided that all joints are completely supported by framing members or by material having a flame spread rating not exceeding 25.

3280.709(c) - Required clearance from water heater to combustion as per its listing.

3280.709(d) and WAC 296-150M-0610(d) - Combustion air intake is from outside source. Vents in skirting per the WAC.

3280.710(a)(2) - Roof jack is proper, listed and sealed.

3280.705(k)(3) - Gas shut off valve at appliance.

3280.609 (c) and WAC 296-150M-0610(h) - All water heaters shall have approved and listed fully automatic temperature and pressure relief valves drained to outside of skirting. Must use the same size pipe as opening in T&P valve.

3280.709(d)(2) - Compartment must be sealed from interior of home if unit is not sealed combustion type.
3280.230(b)(4) and .203(b)(5)

**Cooking Appliance**

Flame spread limitation and fire protection requirements: Exposed interior finishes adjacent to the cooking range shall have a flame spread rating not exceeding 50, except that backsplashes not exceeding 6 inches in height are exempt (adjacent surfaces include the exposed vertical surfaces between the range top height and the overhead cabinets and/or door ceiling. Refer also the 3280.204(a) - Kitchens Cabinet Protection). Sealants and other trim materials 2 inches or less in width used to finish adjacent surfaces are exempt from this provision, provided that all joints are completely supported by a framing number.

Kitchen cabinet doors, countertops, backsplashes, exposed bottoms and end panels shall have a flame spread rating not to exceed 200. Cabinet rails, stiles, Mullions and top strips are exempt.

3280.204

**Kitchen Cabinet Protection**

The bottom and sides of combustible kitchen cabinets over cooking ranges to a horizontal distance of 6 inches from the outside edge of the cooking range shall be protected with at least 5/16 thick gypsum board or equivalent limited combustible material. One-inch nominal framing members and trim are exempt from this requirement. The cabinet area over the cooking range or cooktops shall be protected by a metal hood (26-gauge sheet metal, or .017 stainless steel, or .024 aluminum, or .020 copper) with not less than a 3 inch eyebrow projecting horizontally from the front cabinet face. The 5/16-inch thick gypsum board or equivalent material, which is above the top of the hood, may be supported by the hood. A 3/8 inch enclosed air space shall be provided between the bottom surfaces of the cabinet and the gypsum board or equivalent material. The hood shall be at least as wide as the cooking range.

The 3-inch metal eyebrow required by paragraph (a) of this section will project from the front and rear cabinet faces when there is no adjacent surface behind the range, or the 5/16 inch thick gypsum board or equivalent material shall be extended to cover all exposed rear surfaces of the cabinet.
Gas Lines
Separate checklists for gas lines are available; please ask for the one that applies to your type of piping.

Structural Alteration
An alteration of structural members requires a plan review by the Department. Structural alteration include but are not limited to:

1. Cutting or notching of roof trusses or rafters;
2. Cutting or notching of floor joists or other floor members;
3. Changes to wall(s) constructions; and
4. Any changes to any part of the steel frame.

Before you do any structural alterations, contact your local L&I construction compliance inspector and discuss your proposed change. You may also call the plan review section at 360-902-5218 to obtain this information.

Note:

1. Unless otherwise specified in the code, the manufacturer’s installation instructions must be followed.
2. Reference to the Nation Electrical Code (NEC) – Copies are available from your local bookstore.
3. Reference to 3280 is the federal standards for “Manufactured Home Constructions and Safety Standards.”

Copies are available as follows:

a. Director, Manufactured Housing Standards Division
   Department of Housing and Urban Development
   451 Seventh Street SW
   Washington DC 20410

4. The use of CSST by Gastite, TracPipe, and Pro-Flex is allowed if the installation is by a qualified installed and installation meets the requirements of the manufacture.
