

DOSH Hazard Awareness eBulletin #1HB2010

Updated February 2, 2024

Attention Washington State Ski Areas and Resorts:

The death of a ski patroller in Wyoming in 2009 has brought focus to use of helmets for head injury prevention among employees who must take to the slopes to accomplish their daily work, often in rugged backcountry locations. Such employees must perform a variety of work activities; sometimes under adverse conditions that could lead to elevated risk for serious head injuries.

Employers in Washington State are required to take steps to make sure that hazards are evaluated and, when indicated, make sure appropriate personal protective equipment (PPE) such as ski helmets, are selected and provided. Employers must also train employees on the capabilities and limitations of their PPE, and other information to make sure use is as effective as possible.

Visit [DOSH's Safety webpage](#) to find worksite rules that specifically apply to [Ski Facilities](#). In addition, you'll need to follow the assessment, selection, fitting, training, use, and other applicable requirements found in the [general PPE rules](#).

For other information that addresses ski helmet selection and use, visit [the national safety council ski slope safety](#).

Please share this work place safety message with others in your industry and safety network.

Please share this bulletin with others in your industry and safety networks.

This bulletin was developed by L&I's Division of Occupational Safety and Health (DOSH) to alert employers, labor groups, and employees to potential hazards associated with work activities. This is not a rule and creates no new legal obligations. The information provided includes suggested guidance on how to avoid workplace injuries. DOSH recommends you also check the related rules for additional requirements.
